NINA

L'Facton Urbanisme

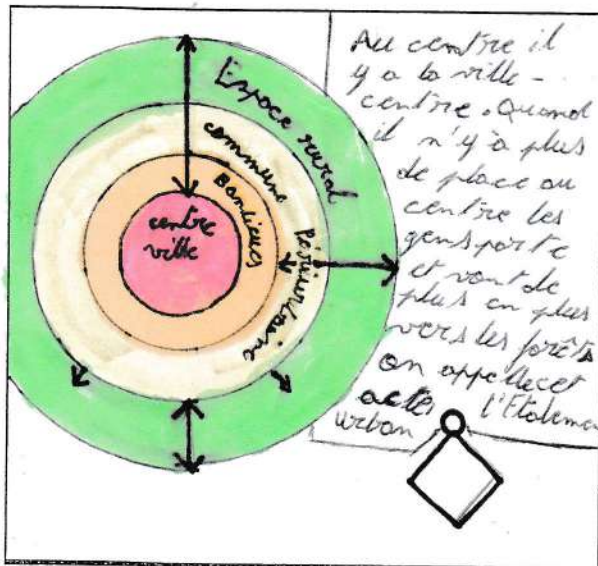

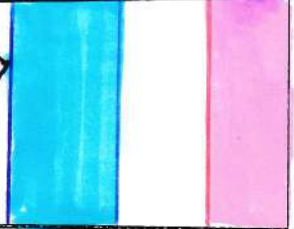

Bonjour à tous et à toutes. Je suis M. Géo. aujourd'hui on va parler de l'aire urbaine.

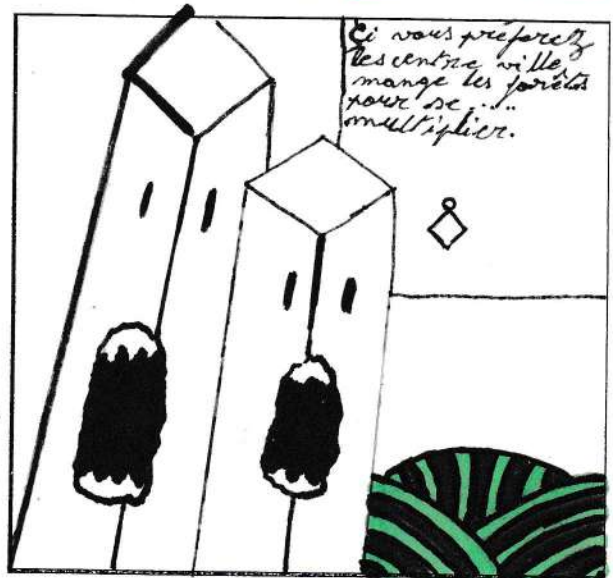

Bien sûr par exemple Paris.

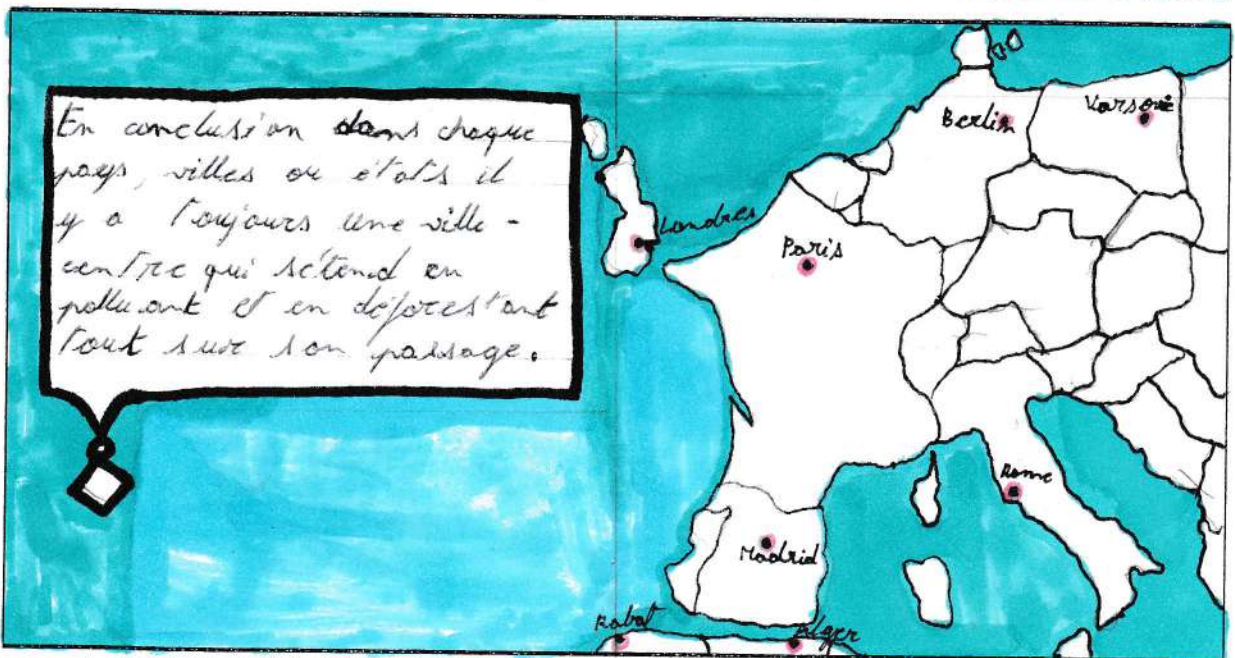

Paris est constituée de 4 zones, pour mieux comprendre regardons ce schéma ...

Au centre il y a la ville - centre. Quand il n'y a plus de place au centre les gens partent et vont de plus en plus vers les périphéries on appelle cet acte l'étalement urbain.

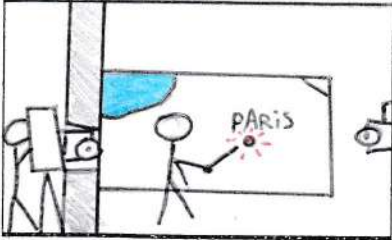

Et vous préférez les centres villes, mange les jardins pour se ... multiplier.

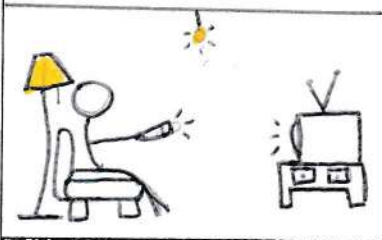

En conclusion dans chaque pays, villes ou états il y a toujours une ville - centre qui s'étend en polluant et en déposant tout sur son passage.

L'étallement urbain

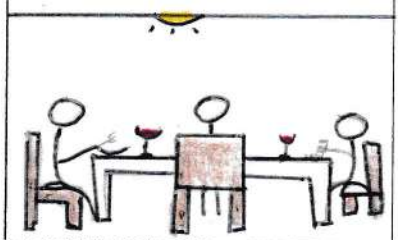

Professeur géothys nous présente le sujet

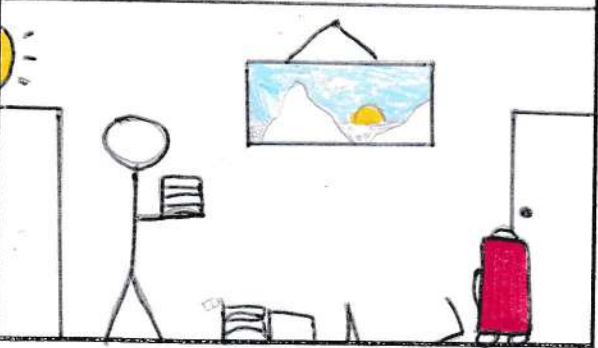

L'agriculteur allume la télé...

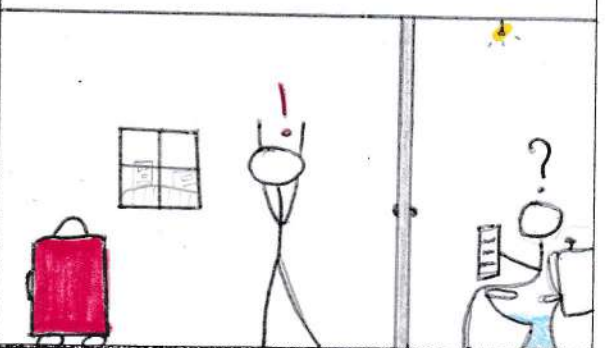

Et en parle à sa famille au dîner

Ils prennent la décision de partir le lendemain matin à la première heure

Mais au moment de partir...

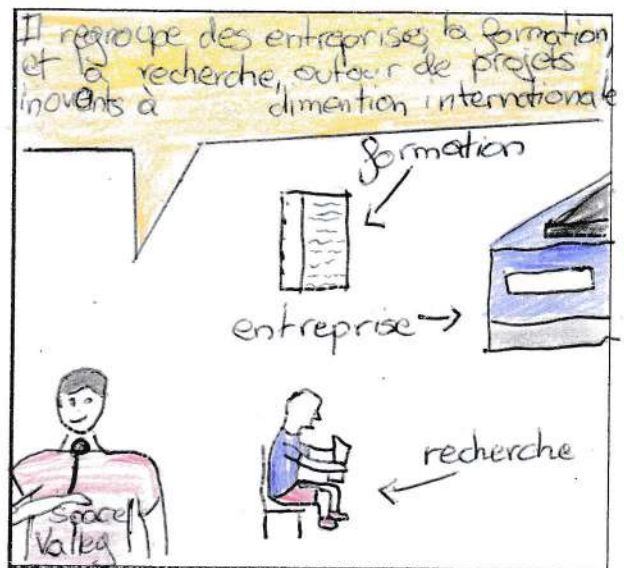

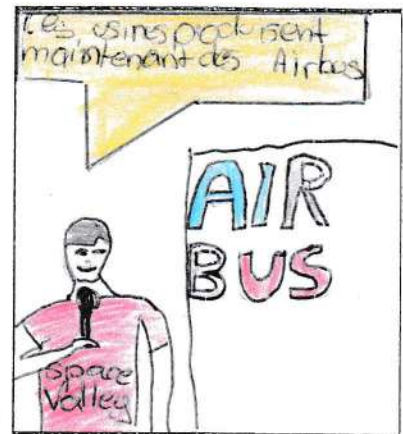

Les dévoreurs de campagne étaient déjà là!
